

## W01 Reading (L1, L2)

### 1. [Working with Groups](#)

Here is the tip that the book suggests

- A good way to communicate
- A good way of tracking and assigning tasks
- A way to avoid stepping on each other's toes when working on similar areas of the project

The good communicate is helpful to be on the same page and work on projects. Slack seems to be a good tool to communicate smoothly. Also, Trello is good application to see what is going on in the project and who's taking each task.

### 2. [Managing the Modern Frontend Workflow](#)

- Package managers: we are using npm for our package manager.
- Bundlers: we are using Snowpack as our bundlers.
- Task managers: we are also using npm for task manager.

### 3. Function "this"

What I learned this week from the reading is "this" function. It is the interesting way and easy to access the object.

Here is one of the examples of the reading:

```
let user= {sayHi() alert("Hello"): };
```

As user.sayHi() code may need the user's name, we could use "this" to access the object called the method instead of user like this:

```
let user={  
  
name= "Alice",  
place="Tokyo",  
  
}  
  
function sayHi(){ alert(this.name); }
```
